

Webster Heating Solutions

Price list

Package	Price	Included
1. Radiator Valve Service	£100	A small call-out for replacing faulty radiator valves, making minor connection changes or resolving a straightforward radiator issue. Suitable where the wider heating system remains in place. • One radiator or valve area • Minor connection adjustment • Basic operation check • Work-area tidy-up
2. Single Radiator Installation	£375	Installation of one new radiator in an existing room where the heating circuit and access are suitable. The package covers standard connection work and commissioning. • One standard radiator • Radiator valves and connections • Minor pipework adjustment • Testing after installation
3. Three-Radiator Upgrade	£950	A practical upgrade for three rooms, replacing or adding radiators while making the necessary local pipework and valve changes. Suitable for room improvements or replacing dated units. • Three radiators • New valves and fittings • Local pipework alterations • System testing and handover
4. Heating Zone Improvement	£2,250	A focused heating upgrade for a section of a property, such as a ground floor, extension or converted area. The work can include several radiators, new pipe runs and improved control of that area. • Up to five radiators • New or altered heating pipework • Heating control arrangement • Room-by-room operation check
5. Extension Heating Installation	£3,250	Heating installation for a new extension or substantial refurbishment area, designed to connect neatly with the existing system. The package suits multiple rooms requiring coordinated radiator positions and pipework. • Up to seven radiators • Pipework for an extension or refurbished area • Radiator valves and fittings • Testing and customer handover

Package	Price	Included
6. Whole-Home Radiator Replacement	£4,750	A coordinated replacement of radiators throughout a typical home, including updated valves and associated connection work. Existing heating routes are reviewed so the new installation works consistently across the property. • Up to ten radiators • Whole-home valve replacement • Required local pipework alterations • System-wide testing
7. Multi-Zone Home Heating	£7,200	A larger domestic heating upgrade for a substantial property, with new radiator circuits, multiple heating zones and coordinated controls. Suitable for homes with extensions, separate floors or different occupancy patterns. • Up to fifteen radiators • Multiple heating zones • New distribution pipework • Controls setup and handover
8. Large Property Heating Fit-Out	£9,800	A planned radiator and heating installation for a large home, converted property or complex refurbishment. The scope covers extensive pipework, room-by-room radiator placement and a coordinated heating layout. • Up to twenty-five radiators • Extensive heating pipework • Multi-zone control arrangement • Phased testing and handover
9. Commercial Whole-Building Installation	£13,500	A substantial heating installation for a commercial premises or whole building, with the system divided into practical areas for installation and control. The project is planned around building use, access, radiator quantities and phased works. • Whole-building radiator layout • Commercial-scale distribution pipework • Multiple heating areas and controls • Phased installation and final testing
